# CAPSTONE PROJECT SHOWCASE

## Project Title

**Music Web Application using Django Framework**

Abstract | Problem Statement | Project Overview | Proposed Solution |  
Technology Used | Modelling & Results | Conclusion

## Abstract

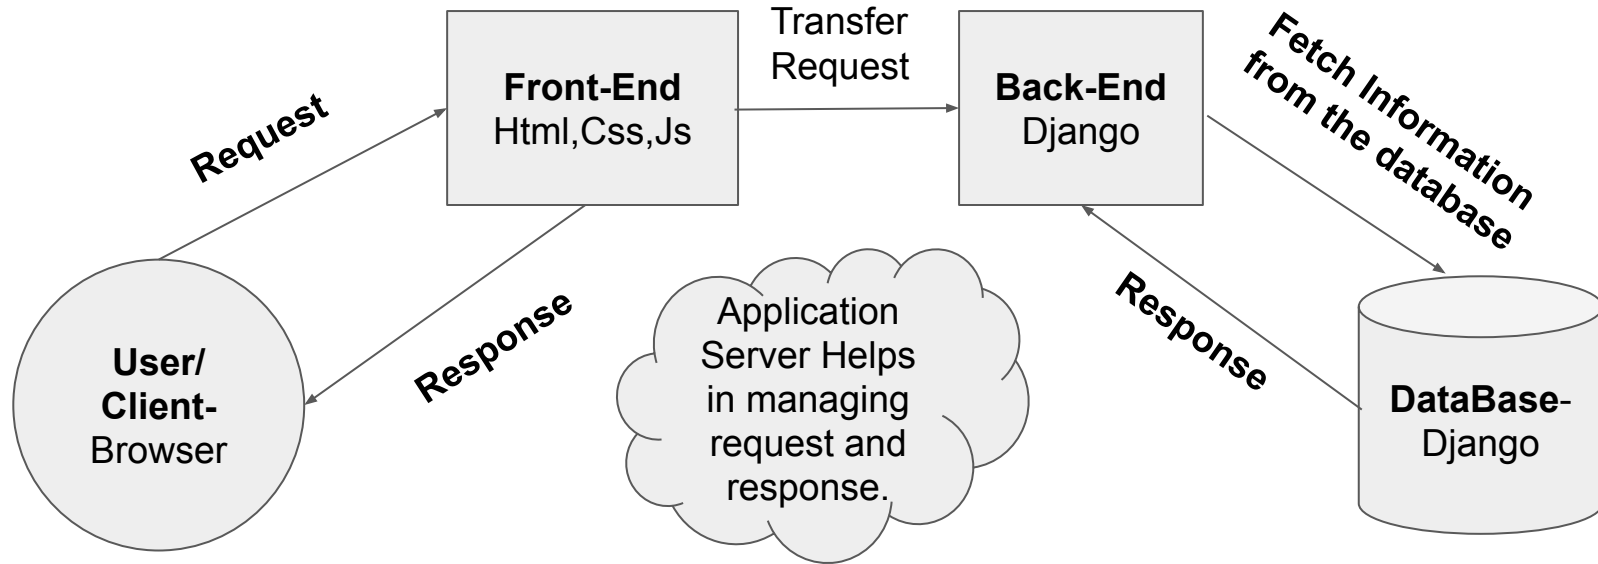

- Developed a music application using various technologies such as Django, JavaScript, HTML, and CSS. Django was used for the database, while Node.js was used for the backend.
- HTML, CSS, Bootstrap and JavaScript were used for the front-end development. Our application offers various functionalities such as accessing music libraries, creating your playlists, logging in to your profile, and much more.

## Problem Statement

To develop a music application using languages:

- HTML, CSS, and JavaScript for the front-end development of the application.
- Django for the backend development and database management,

## Project Overview

## Proposed Solution

- Developed a robust and feature-rich music application using some of the most advanced technologies in the market.
- The application was created using a combination of Django, JavaScript, HTML, and CSS, which allowed us to build a highly efficient and scalable music platform.

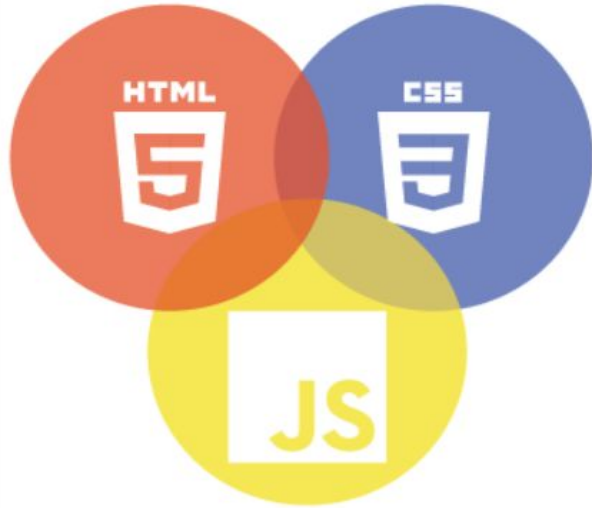

- Our application is designed to meet the diverse needs of music lovers, and it offers a wide range of functionalities that make it stand out from the rest.
- We utilized Django for both the database management and backend development of our application. This choice enabled us to efficiently store and retrieve data while also building a scalable and robust server-side architecture.

- For the front-end development, we used HTML, CSS, and JavaScript, which helped us create an intuitive and user-friendly interface.
- Our application comprises various music libraries, and users can easily access them to discover new music.
- Additionally, users can create their own playlists, log in to their profiles, and much more.

## Future Enhancements:

- Another potential enhancement could be the integration of machine learning algorithms to provide personalized music recommendations based on the user's listening history and preferences.
- Additionally, the application could be made more user-friendly by improving the user interface and adding more intuitive navigation features.
- Finally, the application could be expanded to include a wider variety of music genres and artists to cater to a broader audience.

## Conclusion

We're proud of what we've accomplished with this music application despite limited resources. We're confident that it will offer a seamless and enjoyable experience for music lovers. We look forward to further enhancing its features based on user feedback.

**Thank You!**
